

MIS316 -- Project 4A (5 points)
Due November 20th at Midnight
But Highly Recommended Due By November 6th

Project 4A is the first part of Project #4. All pieces of Project #4 are due at midnight on November 20th but it is highly recommended that you complete 4A by November 6th.

This project requires you to use the SalesStaff table within the Company database. You will build three queries of the SalesStaff table to show (1) all records, (2) only records of full time employees, and (3) records of employees that are either part time or who make more than \$30,000. You will add queries using the query builder in Visual Studio.

Your completed form will look like the image below.

Notice that

- the datagrid was created by adding a new datasource and then dragging it into the form
- each query was built by using the "Add Query" link
- the datagrid and all queries are not "docked" and their "handle" has been hidden
- although named queries cannot have blanks, after making the three queries the text property was changed to replace the underscore characters with blanks

Grading

- program must run including queries, exit button, and name (2 points)
- each query must work correctly (1 point each, minor errors will be 0.5 points each but will not exceed 1 point per query)
